

MULTIFACADES

IT'S NOT A CURTAIN WALL

The Multifacades system is an advanced rainscreen cladding solution that integrates multiple window types into a single, seamless design. Featuring our patented flush window, the system aligns the IGU with the cladding for a sleek, modern finish.

The system is versatile, making it suitable for all construction types, including retrofitting projects, where it improves energy performance and visual appeal.

Design

Architectural creativity is at the heart of the Multifacades. With options for **opaque glass cladding, fixed fenestration, and various other materials**, the system empowers architects to craft unique, aesthetically pleasing facades that stand out while maintaining functionality and performance.

Performance

Multifacades is engineered to surpass strict energy codes and regulations for building envelopes, offering **superior thermal insulation, soundproofing, and air/water tightness**. This ensures top performance, energy efficiency, and comfort for occupants.

Durability

Multifacades combines globally sourced, **high-quality materials with a pressure-equalized rainscreen system** to resist environmental damage. This ensures a long-lasting, low-maintenance facade that enhances building lifespan and provides enduring value.
